

# Digi-Star Expert TMR

## Your Precision Feed Management Dashboard

Every pound of feed lost is one less pound of feed not converted to revenue. With feed accounting for over 50% of inputs, **TMR Tracker Pro+** makes it easy to tightly control the ration that is loaded, fed and consumed. TMR Tracker offers operators additional management tools including operator control, pen review, ingredient tracking and numerous reports. Simply enter your feed ingredients, rations, production groups, and mixer information in your TMR Tracker Pro+ software. During feeding, the actual weights of loaded ingredients and fed ration are saved and returned via WiFi module. TMR Tracker Pro+ has an easy to use dashboard to see “Income over Feed Cost” on a per pen/ per head bases. It interfaces with your herd management software to update head count and track dry matter efficiencies. It is ideal tool to incentivize employees using the mixing and feed accuracy reports.

Using the **TMR 3610** with WiFi module you get an easy-to-read white backlight screen and the ability to program rations from your PC or the front panel of the indicator. It comes with enhanced Rotation Counter & hour meter functionality. Internal “alarm light and horn” alerts operator of approaching target weights and you can make “pen call weights” or “head count” changes from the indicator.

The **WiFi module** provides easy wireless communication between the indicator and your PC.

**Cab Control™** is a wireless operation and read out system installed in the cab of your front-end loader. It communicates with the TMR 3610 on the feed mixer and offers instant access to the weight and feed ingredients to be loaded, making the loading process more efficient, accurate and simple. The CCT 500 has an easy-to-learn, intuitive touch screen display—wearing gloves does not affect the touchscreen technology.
