

N-Force™ is a mutli-strained inoculant that produces more nodules on the tap root and the lateral root than any other brand. The Special Stabilization Process of the Rhizobia requires no extender, resulting in less tacky beans and better flowability.

Inoculant in a keg? Revolutionary!

Everyone loves our kegers!

**MULTI-YEAR
INOCULANT STUDY**
(120 Locations)

What You Can Expect From N-Force™ for Soybeans:

- Formulated for use with IFST
- 240 day survival on seed alone
- 180 days of viability once the keg or jugs are opened
- 48 Hours of viability once the product is in its separate inoculant tank, (other brands last 24 hours)
- 2 year dated product on unopened containers
- Special Stabilization Process of the Rhizobia require less extender, resulting in less tacky beans and better flowability
- Comes in a 15 gal ready to use keg (1,920 units per keg) or 2 x 2.5 gal jugs (treats 640 units total)
- 2 oz. per cwt., so you can use what you need, not a specified package size of 400, 200 or 50 units bladders. Just tighten the N-Force™ lid until your next use.
- Less mess, no boxes, no bags, no bottles
- Better value than the competitors
- Better bottom line

Inoculant is the most underrated add-on to your seed treatment that will enhance yield performance and supplies additional nitrogen to next years crop. Our studies have proven that inoculant will benefit crop yield 70% of the time. It is the most cost effective add-on that all growers should be using.
