PercPlus & CropKarb ON TOBACCO 2010

Timmy McLamb of B & T Farms stands beside one of his tobacco fields where ***DeltAg*** products were used. "The size of the plants were noticeable different where I incorporated ***PercPlus*** and ***CropKarb*** into my spraying program." , according to Mr. McLamb. The increased root development and resulting leaf growth made a noticeable difference in the field compared to other fields with no ***DeltAg*** products in the spray tank. "The larger and more healthy leaves helped us realize a 25% yield increase on the acres we applied ***PercPlus*** and ***CropKarb"***, Timmy stated.

It's Not What You Put Out, but What Gets into the Plant... That Counts!
