

CONSISTENT PERFORMANCE. LESS BULK.

UPL is changing the way growers and applicators view mepiquat chloride applications for their cotton crops. PIX® WSG is a revolutionary patented WSG (water soluble granule) formulation for your cotton crop.

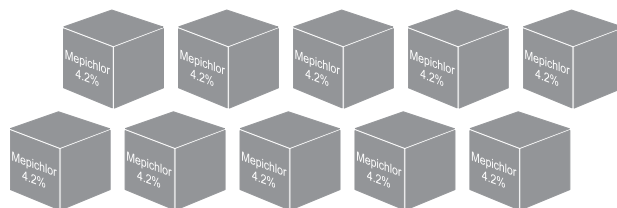

Mepiquat chloride has been in existence for 30 years and is proven technology. PIX WSG simplifies application by reducing the amount of product handled and the number of containers used, which reduces disposal. One pound of PIX WSG is equivalent to 2.5 gallons of Mepichlor 4.2%!

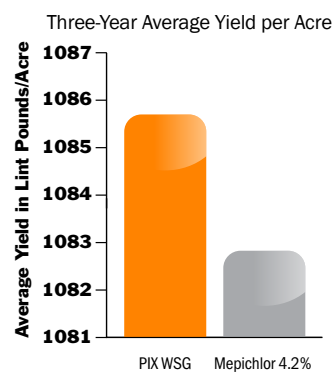

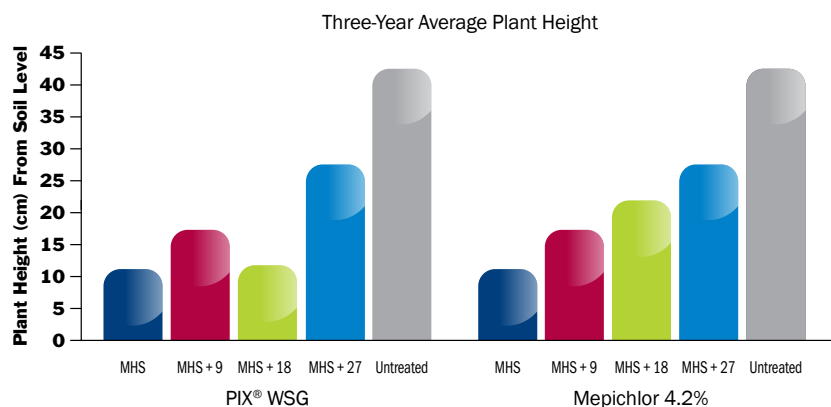

With a patented formulation, PIX WSG mixes easily and has been confirmed through three years of testing to be as efficacious as Mepichlor 4.2%.

The same performance of liquid Mepichlor 4.2%
but with less product to use.

One Case of PIX WSG =
10 Cases of Liquid Mepichlor

USAGE CONVERSION

$$\frac{\text{Number of acres} \times \text{liquid use rate}}{20.4563} = \text{TOTAL DRY OUNCES}$$

EXAMPLE:

160 acres x 10 oz (liquid) / 20.4563 = 78.2 ounces.

MEPICHLOR 4.2% RATE	PIX WSG RATE	1 LB TREATS
4 LIQUID oz	0.2 DRY oz	80.0 acres
8 LIQUID oz	0.4 DRY oz	40.0 acres
12 LIQUID oz	0.6 DRY oz	26.6 acres
16 LIQUID oz	0.8 DRY oz	20.0 acres

BENEFITS

- Convenient, clean, environmentally friendly
 - Less product to handle
 - Fewer containers for use and disposal
 - Ease of mixing
 - Pour and go
- Consistent performance
 - Higher yields over Mepiquat alone
 - More bolls per plant
 - Earlier maturity = better harvestability
- Efficacious
 - Three years of testing in cotton belt
 - Proven results
